

	High Frequency Vibration Analysis of Automotive Body with Viscoelastic Layer
	American Society of Mechanical Engineers, Noise Control and Acoustics Division (Publication) NCA Volume 30, 2003, P23-29
	We have developed a technique for predicting vibration in an automotive body panel with viscoelastic layer. This technique will enable us to obtain a grasp of, and reduce, high-frequency road noise (200~500Hz).
